

Project Management Team

- ❖ Total responsibility for monitoring progress
- ❖ Close supervision at all times
- ❖ Project team keeps you closely informed
- ❖ Provides functional testing, commissioning & system testing
- ❖ Full documentation & operation manuals

On Budget. On Time. On Target Results.

Let Mac Process's Project Management team handle that special project on your planning horizon. Whether it's an engineering study, an in-plant transfer system or a major plant expansion that needs to be on-line fast, our team will get the job done on budget, on schedule and within design specifications. While we work to meet your objectives you and your organization can remain productively engaged in core activities.

Get Expertise Plus Single Point Responsibility

You can be confident that the team selected for your project will have the engineering and technological expertise to bring your project to a successful completion.

We keep you involved throughout the entire project and work with you to pin down your objectives and project requirements. Our partnership approach facilitates turning control over to us once the initial planning is finished.

Everything we do is centered around customer satisfaction. We seek to follow a process that allows our experienced project managers and their teams of engineers to design the most efficient, cost effective system to meet your operational requirements on budget and on time.

Mac Process's Project Management Team specializes in many industrial processes and systems including:

- Material Transfer
- Weighting and Batching
- Minor and Micro Ingredient Systems
- Blend Towers
- Process Dust Collection Systems
- Process Control Systems
